

# MONSOON PLANT CARE TIPS

01

## Reduce Watering

With increased rainfall during the monsoon season, you may need to reduce the frequency of watering your plants. Overwatering can suffocate the roots.

## Adequate Drainage

Ensure that your potted plants have proper drainage holes to prevent waterlogging. Place a layer of gravel or broken pottery at the bottom of the pot.

02

## Trim and Prune

Trim away any dead or damaged branches, leaves, or flowers from your plants. Pruning helps improve air circulation & promotes healthy growth.

03

## Avoid Overcrowding

Provide enough space between plants to allow proper airflow and reduce the risk of diseases. Plants placed too closely together can impede air circulation.

04

## Provide Support

Heavy rainfall and strong winds can cause plants to bend or break. Use stakes or trellises to support taller plants and delicate branches.

05

## Increase Nutrients

With increased rain, nutrients in the soil can get washed away. Consider supplementing your plants with organic fertilizers like vermicompost.

06

## Watch for Pests

Monsoon brings an increase in pests like snails, slugs, and fungal gnats. Regularly inspect your plants for any signs of infestation.
